

2004(54) Ferrari Enzo

POA

Overview

| | |
|-----------------|-------------|
| Mileage | 17,000 km |
| Fuel Type | Petrol |
| Engine Size | 6 l |
| Bodystyle | Coupe |
| Transmission | F1 |
| Exterior Colour | Rosso Corsa |
| Previous Owners | 4 |
| Registration | LF54LKX |

Description

660 bhp, 5,998 cc DOHC 65-degree V-12 engine with Bosch Motronic engine management and electronic fuel injection, six-speed electro-hydraulic computer-controlled sequential F1 transmission, limited-slip differential and traction control, front and rear pushrod-actuated double wishbones with horizontal external reservoir coil-spring damper units, and four-wheel ventilated carbon-ceramic disc brakes. Wheelbase: 2,649 mm Following several years of lacklustre results in Formula 1, Ferrari once again found itself back on top in the early 2000s. With six Constructors' titles between 1999 and 2004 and another two World Championships in 2007 and 2008, the Scuderia was once again a force to be reckoned with. It would be fitting that Ferrari's next limited-production supercar would utilise the best possible technology, engineering, and design, all pioneered within the crucible of motorsport. Countless hours were spent to achieve perfection in the car's design, allowing for the ideal balance of downforce and top speed. An all-new V-12 engine was specially developed for this new car and mated to a six-speed, sequential F1-style gearbox. Prolific use of carbon fibre ensured that the car would be as light as possible, in order to extract every possible ounce of performance. Needless to say, the car's performance was incredible. With 660 horsepower on tap, it could reach 60 mph from a stop in just 3.6 seconds, leading to a top speed of 218 mph. Even more incredible was that it could grind to a halt from 80 mph in just 188 feet. The car was named the Enzo Ferrari, as then-chairman Luca di Montezemolo believed that it was a car that perfectly represented the founder's intentions for road-going automobiles; it is a road car that utilises the best possible technology directly derived from Ferrari's success on the racetrack.
